Outpatient Diagnostics

At Westfield Hospital

Call 610.973.8400

Computer Tomography (CT Scan):

Westfield Hospital's Imaging Department utilizes a Philips 16 slice CT system which enables CT Technologists to perform this slice imaging covering a large area of the body in a single breath-hold.

What to expect during a CT Scan:

You will lie on a table that glides into the opening of the scanner. C T Scans sometimes require the use of contrast, either intravenously or by mouth, to enhance blood vessels and organs and highlight the area being imaged. A C T Scan takes 10 to 15 minutes, depending on the area of the body being scanned.

Patient preparation for a CT Scan:

Intravenous contrast is sometimes administered for CT Scans. If a contrast is required, then you must bring a list of all medications, dosage and how often the medications are taken. You will be required to fast for six hours before your C T Scan. No food or liquids should be consumed during this time and your physician will advise you about taking medications during the fasting period.

If your abdomen or pelvis is being scanned, then please make sure that you do not eat or drink for six hours before the scan. You will need to drink a flavored liquid that coats the stomach to allow for better visualization of these organs.

Once your CT Scan is completed, you may resume your normal diet, but it will be necessary to increase the amount of fluids you drink for several hours so that the contrast material is flushed from your system. Persons with diabetes who are taking medication must call their doctor's office to get instructions on stopping medications, such as Glucophage®, Gluconance®, Metaglip®,... For patients over 60 years of age or diagnosed kidney disease, a special blood (lab) test is required, called a BUN creatinine ratio. Your doctor will provide you with a prescription for this blood work and you will need to arrive earlier than your scheduled time to have this drawn. This will be discussed with you at the time of scheduling.

General Radiology:

The X-Ray department is available 24 hours per day, everyday of the year. No appointment is necessary.

**LAB, X-RAY, C T SCAN
open 24/7.**

LAB and X-Ray: no appointment needed.

**Available on premises is
Horizon Open MRI.**

**Call 610. 973. 8414
for appointment.**

For ultrasound appointment,

Call 610.973.8400

Ultrasound:

Westfield Hospital has state-of-the-art ultrasound equipment and spacious examination rooms to ensure patient comfort.

What to expect during an Ultrasound:

The transducer will be coated with a colorless odorless gel to help glide it over your skin. You will feel slight pressure while the transducer is glided over your skin.

Patient Preparations for Pelvic Ultrasound:

In order to obtain the best images, the bladder needs to be full. Drink 32 ounces of water or any other type of non-carbonated beverage one hour prior to your appointment and do not void.

Patient Preparations for an Abdominal Ultrasound:

If you are having an abdominal ultrasound, then you must fast for six hours prior to the exam. No food or beverages should be consumed, except for small amounts of water.

Patient Preparation for a Renal Ultrasound:

Do not void one hour prior to ultrasound.

Patient Preparation for Venous Ultrasound:

Do not wear stockings; wear easily removable clothing.

Patient Preparation for a Thyroid, Testicles or Hip Ultrasound:

No preparation is needed for an ultrasound of the thyroid, the testicles or pediatric hips.
